Key Accounting Principles Covered

Below is an overview of the core accounting principles that Romero López emphasizes in his books. Understanding these principles is essential for anyone who wants to interpret financial statements accurately and make informed decisions.

1. La Entidad Contable (Accounting Entity)

The accounting entity principle states that a business is a separate entity from its owners. This separation ensures that financial records reflect only the transactions of the business, not personal affairs.

2. La Continuidad (Going Concern)

This principle assumes that a business will continue to operate indefinitely. It affects how assets and liabilities are valued, especially in situations of impending bankruptcy.

3. La Medición Monetaria (Monetary Measurement)

All transactions must be recorded in monetary terms, providing a common unit for comparison and aggregation.

4. El Registro en el Momento del Evento (Accrual Basis)

Revenue and expenses are recorded when they are earned or incurred, not when cash changes hands. This principle aligns financial statements with the economic reality of the business.

5. La Conservaduría (Conservatism)

When in doubt, accountants should choose the option that does not overstate assets or income. This principle protects stakeholders from receiving overly optimistic financial reports.

6. La Relevancia y Fiabilidad (Relevance and Reliability)

Information must be useful for decision-making and must be free from material error or bias.
