What is the Audi RNS E System?

The Audi RNS E system is a sophisticated in vehicle navigation platform that combines GPS technology with Audi's proprietary infotainment software. It offers:

- Accurate, up to date maps covering major routes and local roads.
- Real time traffic information that adjusts routes to avoid congestion.
- Integrated voice guidance for hands free operation.
- Seamless connectivity with smartphones via Apple CarPlay, Android Auto, and Audi's own MMI (Multi Media Interface).
- Advanced features like traffic aware navigation, route planning, and points of interest (POI) search.

The RNS E system is part of Audi's broader "Connected Car" strategy, aiming to provide drivers with a cohesive digital ecosystem that enhances safety and convenience.

Getting Started: Setting Up Your RNS E System

1. Initial Activation

When you first turn on your Audi, the RNS E system will prompt you to activate the navigation module. If you have a pre installed navigation package, simply follow the on screen prompts. For new vehicles, you'll need to insert the navigation CD or download the latest map update via the Audi Connect portal.

2. Software Updates

Keeping the RNS E software current is essential for accurate navigation and new feature access. Updates can be applied in two ways:

1. Via Audi Connect: Log into your Audi Connect account, download the latest software package to a USB drive, and insert it into the vehicle's USB port.
2. On the Go Updates: If you have a data subscription, the system can download updates directly over the cellular network.

After inserting the USB, the system will detect the update and guide you through the installation process.

3. Configuring Preferences

Navigate to the “Settings” menu within the RNS E interface. Here you can tailor:

- Map display (night mode, 3 D, or 2 D).
- Voice guidance language and volume.
- Units of measurement (km or miles).
- Route preferences (fastest, shortest, or scenic routes).

Exploring Key Features of the RNS E Navigation

1. Real Time Traffic Updates

One of the standout features of the RNS E system is its real time traffic feed. By connecting to Audi’s traffic network, the system can detect congestion, accidents, or road closures and automatically re route you for the fastest path. This dynamic routing is especially useful in urban environments where traffic conditions can change rapidly.

2. Voice Guidance and Haptic Feedback

Voice prompts are delivered through the vehicle’s speaker system, offering clear, concise directions. The RNS E also supports haptic feedback—vibrations in the steering wheel or seat—to alert drivers of upcoming turns or lane changes, providing an additional layer of safety.

3. Points of Interest (POI) and Search Functions

Looking for a restaurant, gas station, or service center? Use the POI search to locate nearby amenities. The system also allows you to save favorite destinations for quick access.

4. Integration with Audi MMI and Smartphones

The RNS E is fully integrated with Audi’s MMI system. You can use the steering wheel controls to navigate menus, or connect your smartphone via Apple CarPlay or Android Auto to access apps such as Spotify, WhatsApp, or Google Maps, which can be displayed on the central infotainment screen.

5. Route Planning and Multi Stop Trips

Planning a road trip? The RNS E lets you add multiple stops, reorder them, and view estimated travel times. It also calculates the best route based on current traffic and your preferences.
